

Summer of Adventure!

All little explorers are invited to join us on our summer of adventures!

Each week we will explore new and exciting places, experiencing the wonders of our world and keeping a field journal along the way to document our discoveries!

Grab your adventure buddies and come along!

WEEK 1 (June 21- June 25): Outer space! 3...2...1...BLAST OFF! Students will experience out of this world activities that will excite these soon to be astronauts. We will travel around the solar system, encounter meteors, asteroids, and we will even practice shooting rockets into the sky!

WEEK 2 (June 28- July 2): Arctic! As the summer gets HOT, we'll get cool by learning about the frozen tundra. No need to pack those mittens and earmuffs, students will learn about arctic animals, make their very own frozen treats and create art using ice!

WEEK 3 (July 6- July 9): Dinosaurs and Volcanoes! Welcome to the Prehistoric Age of dinosaurs and erupting volcanoes! Students will learn about fossils, fun facts about dinosaurs, making a volcano as a class and watching it EXPLODE.

WEEK 4 (July 12- July 16): Safari! Lions, Giraffes & Rhinos...OH MY! This week students will take a ride through the safari learning about a new animal each day and their habitat. Adventure is out there and so are we!

WEEK 5 (July 19- July 23): Camping! Don't forget to pack the essentials! This week is all about the great outdoors. Students will be exploring the forest habitat, learning about some of our country's awe-inspiring national parks and roasting marshmallows with some of their best buds.

WEEK 6 (July 26- July 30): Mountains! What better summer activity than a good hike? Pack the water as we travel through different mountain ranges around the world and see who lives there. Knock Knock...who's there?! Birds! and bears! and goats!, OH MY!

WEEK 7 (Aug 2- Aug 6): Garden! Honey, I shrunk the kids! This week we get teeny, tiny to explore the bugs that help make our gardens grow. From worms and bees to ladybugs and butterflies we will see how each tiny creature plays a BIG part in our lives. We will even watch the life cycle of some of these bugs right before our eyes!

WEEK 8 (Aug 9- Aug 13): Water! We are ending our Summer Camp with a SPLASH! Students will dive deep learning about our vast ocean, slip-n-slide with their class and play duck...duck...SPONGE. Students will embrace the wet & wild!
